BUB Mufflers for Harley-Davidson Touring Models

Are you in tune with your ride? You know the way it feels, the way it sounds, the way it looks... It is, after all, an extension of you, your personality, persona, and ego. Call it what you will... it has to look good... even more importantly SOUND good.

The new rides today have fuel injection. And while they have made a lot of improvements to our bikes, they have also altered that sound. You know the low rumble of the carbureted bikes? Are you old enough to remember the sound that stirred your soul? Well, I have found it! BUB Enterprises has a true dual exhaust that will bring tears to your eyes. You'll nostalgically recall the sound of youth and excitement.

The person behind BUB Enterprises is Denis "BUB" Manning. For those of you who don't know, BUB stands for "Big Ugly Bastard" - a nickname earned early in his motorcycle racing career while working with "The Flying Dutchman" Dutch Mueller. One more amazing fact before talking about the exhaust system we're reviewing... in September 2009, at Utah's Bonneville Salt Flats, the BUB Seven Streamliner set the new land speed record. It is currently the World's Fastest Motorcycle at 367.832 MPH. They are now working to hit 400 MPH this year, with new tires designed by Goodyear.

Now we are not saying you are going to be going that fast,

but what we will say is that your bike will run good, sound good, and LOOK great!

We have known Denis for several years now and he asked us to test his pipes on our bike. We tested the 7 True Dual exhaust system on a 2008 HD Ultra. With over three thousand miles on the pipes, we found no blueing or turning of color. And the sound is true old school HD. I thought that sound was gone for good with these new fuel injected bikes. The pipes are easy to put on your bike and the kit contains everything you need for installation.

Since its inception, BUB has created exhaust systems with exceptional power and torque throughout the power band. Match the TDX headers with the available 7 Stealth mufflers and you will get unbelievable performance, with a sound level that is legal in all 50 states.

Check out these facts:

- BUB 7 True Dual exhaust systems utilize performance-

proven stepped header technology running from 1 3/4 inches to 2 inches.

- Specially designed, Dyno proven baffles increase performance and give the system a deep aggressive tone without objectionable noise.
- The headers are covered by 2 1/4" heat shields with the BUB 7 logo precisely die-stamped into rear heat shield.
- 3 1/2" mufflers run the length of the bags and finish with unique adjustable slash-cut outlets. The slash can be fixed in the upward or downward position.
- The system comes standard with dual O2 sensor ports.
- All BUB 7 systems are built to BUB's highest quality and performance standards.

BUB makes pipes for most makes of bikes, both Metric and American. Find the ones that fit your bike and get moving.

Look for your pipes here: BUBEnt.com. And if you want to see a video of the BUB exhaust, visit TwoWheelThunderTV.com.
